New Metrics

Hiring Team -- Data Scientist (Req. #883)

Re: Data Scientist -- Delivery Team / Technology & Analytics

I am applying for the Data Scientist role at New Metrics. Building predictive models -- churn, propensity, segmentation -- that go into client engagements and deliver measurable value is exactly the work I have been doing, and the consulting delivery context is where I want to grow.

At **ExactSpace Technologies**, I built and shipped predictive models end-to-end -- from raw feature engineering through production deployment and ongoing monitoring. A time-series forecasting model for boiler oxygen levels reduced fuel consumption by **18%**. A classification model for real-time billet QA achieved **92% accuracy** and cut manufacturing downtime by 15%. An anomaly detection pipeline analyzing **10,000+ operational logs** improved failure-prediction F1-score by 30%. These were not academic exercises -- they ran in production, against client SLAs, and required stakeholder-ready explanations of model behavior.

At **Iter Innovandi**, I extended that production discipline into GenAI: optimizing FastAPI backends integrated with MongoDB for a **30% retrieval latency improvement**, tracking performance post-deployment, and communicating progress to clients on concurrent project deliveries. At **Mechademy**, I built client-facing data cleaning pipelines processing **50K+ rows/week** and an automated EDA module that cut time-to-insight by 40% -- directly accelerating delivery cycles across engagements.

My stack aligns tightly with your requirements: Python (Scikit-learn, XGBoost/LightGBM), PySpark, advanced SQL, MLflow, and cloud platforms (Azure, AWS, GCP, Databricks). For explainability, I have applied SHAP and feature importance analysis in production contexts -- including a peer-reviewed application in my [IEEE ICDSIS 2022 publication](#) on supervised ML for fake review detection. I also hold a Postgraduate Diploma in Business Insights and Analytics, which means I frame model outputs in terms of business impact -- the language consulting clients actually need.

I would welcome the opportunity to discuss how my background maps to the specific client engagements your team is delivering. Portfolio at sayamalt.github.io/My-Portfolio-Website.

Sincerely,

Sayam Kumar
